

Hospital Report Summary

Dr Tan Ah Moi has been the doctor of Mr Tan Ah Kow since November 2010. He re-examined Mr Tan on 20 June 2015. The clinical impression was that he was manifesting behavioural and psychological symptoms secondary to Dementia. Mr Tan is at present incontinent, and is unable to bathe or use the toilet on his own. He is, however, able to feed himself. He was brought to the clinic in a wheel chair. His mood was euthanised. His condition was described as normal. He had a history of medical conditions. He has had hypertension and hyperlipidemia since 1990 and suffered several strokes in 2005. He subsequently developed heart problems (cardiomyopathy), cardiac failure and chronic renal disease. He suffered a stroke on 1 April 2010 and was treated in ABC Hospital. He also had a heart attack on 15 April 2010. His current condition is described as normal.
